

THE VIRTUAL LINE

DECEMBER 2018

LIMNTECH

SCIENTIFIC, INC.

Stripers continue to work at a furious pace all over the country as the season extends in the north due to excessive rain throughout the construction season.

Here at LimnTech, we are grateful to have visited so many companies with our demo van this year, highlighting the potential of the LifeMark®-75 Automated Layout System.

We are pleased to announce that the first single-operator system installed on a Ford F-250 has left the factory. We currently have orders in-house for five more systems.

The Ford F-250 single-operator system includes the following components:

- A complete LifeMark®-75 Automated Layout System to record and layout markings, consisting of:
 - A fixed-mount front laser to locate existing markings
 - A PTO-powered 30-gpm hydraulic power system actuating a 4' left-hand side, computer-controlled carriage
 - A high-pressure airless paint system, along with a 5-gallon tank
 - A paint timing system

Detailed photos are available on our website.
