## Raising the Bar in Roadway Safety Manufacturing LimnTech's Breakthrough Year in Production

by [Greg Driskell](#) | [Company News](#), [LifeMark-100](#)

**2024** has been a year of transformation for LimnTech Scientific's manufacturing operations. While much of the pavement marking industry has accepted long equipment lead times as the norm, that's never been our goal. From the beginning, we set out not to follow the standard—but to set it.

Over the past year, we've **refined** our approach to production by investing in the three areas that matter most: **people, processes, and parts**. The result? A 200% increase in throughput volume, major reductions in manufacturing backlog, and—most importantly—**on-time delivery of high-quality systems** to our customers.

Earlier this year, **deliveries were delayed** well beyond their estimated completion dates. Today, thanks to a relentless focus on efficiency, scheduling discipline, and refined workflows, we're hitting our delivery timelines and keeping our quality standards as high as ever.

DISCOVER THE FUTURE OF ROADWAY INNOVATION

## ON THE LINE

*[Limntech.com/company/ontheline](http://Limntech.com/company/ontheline)*

That's not just theory—it's reality. In June, our first **spec-built LifeMark-100** will roll off the line, offering our most in-demand configuration without the wait. It's a milestone that represents how far we've come and where we're heading.

As we look to 2025, we're expanding our production capacity with a new facility, dedicated build personnel, and refined manufacturing processes. These investments will allow us to further reduce lead times, support continued growth, and meet the demands of our expanding customer base.

And we're not stopping there.

Even while streamlining our current lineup, our engineering and production teams have been hard at work refining the new **LifeMark-300 Auto Restripe System**—a powerful tool designed to improve pavement marking maintenance operations by automating carriage and application functions. This system is another step forward in our mission to **improve worker safety through innovation and automation**. You can learn more about the LifeMark-300 [here].

We're proud of what we've accomplished, but we're even more excited about what's ahead. Because at LimnTech, progress isn't a destination—it's our direction.
